

For the latest digital camera and for your beloved manual camera.  
This one flash unit achieves an easy quality upgrade.

PF20XD

Compatible with digital cameras triggered  
by wireless auto flash

**PF20XD**

**Compact auto flash for any camera and for easy use.**

The auto flash is an electronic flash for which a sensor automatically adjusts the amount of light. The auto flash can be used whether attached to a camera or not because it adopts a method of flashing in wireless synchronization

with the emission of light by another electronic flash. You can readily enjoy flash photography by attaching the auto flash to various cameras, from the latest digital cameras to film cameras and range-finder cameras.

**Guide Number 20 (ISO100-m)**

**Flash Control Function: Flash Auto (F2.8, F4, F5.6)**  
Power Ratio: 5Steps in manual mode

**When pulling up the built-in panel, the flash is applicable to wide-angle lens.**

**The connecting cord is not necessary by wireless synchronization.**

\*The Slave Sensor senses and synchronizes with light reflected from the subject, but the flash will not synchronize in places where reflected light is weak.

**Compatible with Pre-flash cancellation of digital camera**

with some types of digital cameras, the exposure is adjusted with first pre-flash and the picture is taken with the second flash. The Pre-flash cancellation doesn't fire with the first pre-flash, but synchronize with second flash.

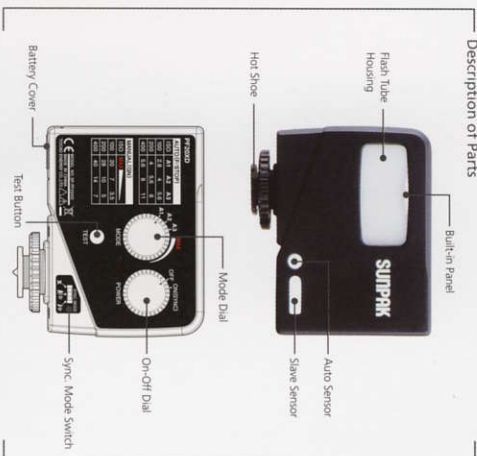

**Easy to install on camera by the attached bracket.**

Using external flash

Not using

For film cameras auto flash

**PF20X**

**Simple design fit for film cameras.**

The auto flash is an electronic flash for which a sensor automatically adjusts the amount of light. It is connectable with a hot shoe or sync code. It also fits the classic design of film cameras, range-finder cameras, etc
